

MOBICASE 2010

The 2nd International Conference on Mobile Computing, Applications, and Services
October 25-28, 2010 • Biltmore Hotel & Suites, Santa Clara, CA, USA

www.mobicase.org

Call for Demos and Posters

Research in mobile computing has brought us knowledge/experience as well as hardware/software platforms, frameworks, libraries and toolkits. An ultimate goal of mobile computing is to build useful applications and services that meet people's needs. MobiCASE 2010, to be held in the heart of Silicon Valley, provides opportunities to researchers and practitioners from both the academia and industry to present and discuss their work on mobile applications and service provisioning.

Call for Demos

MobiCASE seeks proposals for live demonstrations that serve to disseminate advanced technologies and systems in mobile computing applications and services. Demonstrations will be selected on the basis of technical merit, novelty, relevance to the mobile computing community, and feasibility of the presentation. We particularly encourage those demonstrations that will allow participation by conference attendees. The demonstration session aims to showcase interesting research prototypes at all stages of maturity, and as such we welcome demonstrations of both published and unpublished work. The demonstration submission should be an extended abstract up to two pages long, including all figures and references. The abstract should be formatted in two columns, single-spaced, with a font no smaller than 10-point. The abstract should include a description of the demonstration, the equipment to be used, any special requirements beyond a table/booth with power outlets, as well as possible interactions (interoperability or interference) with other demonstrations. We will try to accommodate reasonable requirements, however such accommodations will be limited and all demonstrations will be hosted in one large open space. Proposals should be submitted electronically by emailing the extended abstract as a PDF attachment to demosposters_chair@mobicase.org. The email must include the title of the demonstration and the author list, including affiliations. Extended abstracts of accepted demonstrations will be included in the conference proceedings, and should appropriately reference previous or accepted publications of the associated work.

Call for Posters

MobiCASE seeks posters from researchers in both industry and academia that describe recent and on-going work in mobile applications and service provisioning for mobile users. Posters will be selected on the basis of technical merit, novelty and relevance to the mobile computing community. They will be presented in a special session during the conference to allow presenters to interact with conference attendees and gain feedback on their ongoing work. The poster session will be an excellent venue for highlighting early work on new and controversial mobile applications and end-to-end systems. Proposals for posters should include an extended abstract up to two pages long, including all figures and references. The abstract should be formatted in two columns, single-spaced, with a font no smaller than 10-point. Submissions may include an electronic copy of the poster in addition to the abstract. Proposals should be submitted electronically by emailing the extended abstract and the poster, if included, as PDF attachments to demosposters_chair@mobicase.org. The email must include the title of the poster and the author list, including affiliations. Extended abstracts of accepted posters will be included in the conference proceedings.

Demo/Poster Chair: Angela Nicoara, *Deutsche Telekom R&D Labs, USA*

Important Dates

Submissions due	Friday, July 2, 2010, 11:59PM PDT
Acceptance notification	Friday, July 16, 2010
Camera ready abstracts due	Friday, August 20, 2010
Workshops	Thursday, October 28, 2010
MobiCASE Main Conference	Monday-Wednesday, October 25-27, 2010
